said first chemical composition is comprised of a solid, water-soluble chemical composition which is not reactive with, soluble in or a solvent for said membrane.

Claim 17 (previously added) The article of claim 16 wherein said first chemical composition is selected from the group consisting of alkali, alkaline earth metal and ammonium halides, oxides, hydroxides, carbonates, bicarbonates, perborates, peroxides, percarbonates, bisulfates and persulfates.

Claim 18 (currently amended) The article of claim 17 wherein said membrane is a composite material comprised of said first material and further comprised of a second material. wherein said first material is a supporting matrix for said second material which is fixed in said supporting matrix;

said second material is a particulate solid, having a particle size in the range of from about 1 to about 15 microns, present in said composite material in an amount in the range of from an amount greater than about 0 to about 50 percent of said particulate solid by total weight of said composite material:

said second material is different from said first material, and is not reactive with, soluble in or a solvent for said first material or said first chemical composition; and

said composite material is present in said eapsile article in an amount in the range of from about 10 to about 50 percent by weight of said composite material by weight of said capcule article.

Claim 19 (previously added) The article of claim 17 wherein said first material is reacted with a cross linking agent selected from the group consisting of polyaziridines, carbodiimides, epoxies and metal ion cross linkers.

Claim 20 (previously added) The article of claim 18 wherein said second material is selected from the group consisting of silica, calcium carbonate, titanium dioxide, barium sulfate, calcium sulfate and mixtures thereof.

Claim 21 (previously added) The article of claim 17 wherein said first chemical composition has a particle size in the range of from about 10 to about 60 mesh US Sieve series.

Claim 22 (currently amended) The article of claim 20 wherein said first material is reacted with a cross linking agent selected from the group consisting of polyaziridines, carbodiimides, epoxies and metal ion cross linkers.

Claim 23 (previously added) The article of claim 20 wherein said first chemical composition has a particle size in the range of from about 10 to about 60 mesh US Sieve series.

Claim 24 (previously added) The article of claim 19 wherein said cross linking agent is a polyaziridine.

Claim 25 (previously added) The article of claim 22 wherein said cross linking agent is a polyaziridine.

Claim 26 (previously amended) The article of claim 19 wherein said first chemical composition has a particle size in the range of from about 10 to about 60 mesh US Sieve series.

Claim 27(previously amended) The article of claim 22 wherein said first chemical composition has a particle size in the range of from about 10 to about 60 mesh US Sieve series.

Claim 28 (previously added) The article of claim 22 wherein said second material is silica.

74	Claim 29 (withdrawn from consideration)
75	Claim 30 (previously added) The article of claim 28 wherein said cross linking agent is a
76	polyaziridine.
<i>1</i> 7	Claim 31 (canceled)
78	Claim 32 (withdrawn from consideration)
79	Claim 33 (withdrawn from consideration)
.80	Claim 34 (previously added) The article of claim 20 wherein said first material is reacted
81	with a polyaziridine cross linking agent.
82	Claim 35 (previously added) The article of claim 21 wherein said first material is reacted
83	with a polyaziridine cross linking agent.
